Profile Summary

Backend engineer with 4+ years' building telecom OSS microservices using Java, Spring Boot, Kafka, Docker, Kubernetes and Jenkins. Delivered TMF-622 order orchestration, logistics workflows, and API gateway migrations for Telstra NBN, Fiber, and Digital SIM platforms. I am skilled Backend engineer with 4+ years in designing, building, and operating production-grade distributed services at scale using Java, Spring Boot, Kafka, Docker, and Kubernetes. Owned TMF-622 order orchestration (50K+ daily orders), logistics and catalogue migrations, and zero-downtime API gateway cutovers for Telstra NBN, Fiber, and Digital SIM. Strong in performance tuning, event-driven architecture, live-site support, and observability with Open Telemetry tools (Splunk, ELK, New Relic).

Technical Skills

Languages and Frameworks: Java, Spring, Spring Boot, Shell Script, JavaScript
Architecture: Microservices, REST APIs, Event-Driven Architecture, TMF-622, RBAC, Service Mesh.
Data and Messaging: Apache Kafka, PostgreSQL, MySQL.
DevOps and Cloud: Docker, Kubernetes, Jenkins, AWS (EC2, S3, Load Balancer, RDS, EKS, KMS, EBS), Azure, PCF
Monitoring: JFR, Splunk, Fluent Bit, ELK, New Relic
Tools: Cursor, Github Copilot, APIGEE Edge, Azure Entra ID, Tricentis Tosca, Confluence, JIRA, Open API, Git, Gerrit
Operating System: Linux, Windows

Experience

Amdocs DVC India Pvt Ltd **May 2022 - Present**

AI Software Engineer | Pune, India

- Built and operated 8+ Java + Spring Boot microservices for TMF-622 product-order orchestration across NBN, Fiber, and Digital SIM, processing 50K+ orders per day.
- Tuned Kafka consumers and PostgreSQL queries, reducing order fulfillment latency by 20% under 3K+ concurrent SVT transactions.
- Built Complex Logistics workflows end-to-end, cutting manual coordination by 30% across connected dev through PROD environments.
- Executed OKAPI/OGW/Entra ID migration with zero-downtime cutover, securing 15+ production APIs under centralized gateway and RBAC.
- Owned production reliability: live support, defect root-cause analysis, and safe releases from development through production.
- Delivered Order Manager Simulator and EventHub for Telstra Fixed Site Connectivity, reducing integration test cycles by 40%.
- Migrated Service Inventory and Master Catalogue across B2B and B2C lines of business.
- Partnered with the client onsite (Aug 2024) in Melbourne (VIC) for product review and production live support.
- Best Employee recognition; Amdocs Townhall Nov-2025 recognition for TMF-622, FSC, and Adaptive Collab.

Projects

TSF Mobile B2B — *Java, Apache Camel K, Spring Boot, Kafka, Kubernetes (2026)*

- Kafka-backed fulfillment for Mobile B2B: mapped and validated activity events into one shared envelope, published them asynchronously off the order path, and wrote the outcome back to service order management. Shared adapter library so a new event extends the chain; bad payloads are held aside so they do not stall the flow.

TMF-622 Product Order Orchestration — *Java, Spring Boot, Kafka, PostgreSQL, TMF-622 (2025 - 2026)*

- Eight or more event-driven microservices that take a telecom product order through fulfillment for NBN, Fiber, and Digital SIM (50K+ orders a day). Tuned Kafka consumers and PostgreSQL queries; fulfillment latency dropped about 20% under 3K+ concurrent SVT transactions.

Complex Logistics — *Java, Spring Boot, Kafka, Kubernetes, Camel K (2022 - 2024)*

- Led the Simplex to Complex logistics migration and built Complex Logistics workflows from development through production, cutting manual coordination by about 30%.

Catalogue & inventory — *multi-LOB, B2B / B2C (2024 - 2025)*

- Migrated Service Inventory and Master Catalogue across lines of business for B2B and B2C products, so orders stay aligned with what can be sold and what is already in place.

Fixed Site Connectivity — *Order Manager Simulator, EventHub (2024)*

- Built a simulator and event hub so Telstra Internet Direct integration scenarios can be tested without the full live path, shortening integration test cycles by about 40%.

Gateway & identity — *APIGEE, Azure Entra ID, RBAC – (2025 – 2026)*

- Zero-downtime cutover from OKAPI to OGW to Azure Entra ID. Fifteen or more production APIs now sit under one gateway with RBAC.

AWS to Azure — *Docker, Kubernetes, Jenkins (2025)*

- Took part in migrating workloads and platform components from AWS to Azure on the same Telstra delivery.

ITAF + AI tests — *Tricentis Tosca, Cursor, GitHub Copilot (2025)*

- Built an in-house Tosca regression framework with AI-assisted test-case generation, cutting regression authoring effort by about 25%.

Certifications

- **AWS Cloud Practitioner** **May - 2025**
- **Tricentis Tosca Fundamentals - Automating Web Application Testing (AS1)** **June - 2024**

Education

Sunbeam Institute of Technology, Pune **2021 - 2022**

- Post Graduate Diploma in Advanced Computing (PGDAC) | Percentage: 69%

Shivaji University, Kolhapur **2016 - 2019**

- B.E. Automobile Engineering | Percentage: 66%
